INTRODUCTION

The Central Bank of the UAE (CBUAE) supervises Emirates NBD P.J.S.C. (the Bank) and its subsidiaries (together referred to as the "Group") on a consolidated basis, and therefore receives information on the capital adequacy of, and sets capital requirements for, the Group as a whole. The capital requirements are computed at a Group level using the Basel III framework of the Basel Committee on Banking Supervision (Basel Committee), after applying the amendments advised by the CBUAE, within national discretion. The Basel framework is structured around three 'pillars', with the Pillar 1 minimum capital requirements and Pillar 2 supervisory review process complemented by Pillar 3 market discipline.

Pillar 3 disclosures 2022

Pillar 3 disclosures complement the minimum capital requirements and the supervisory review process. Its aim is to encourage market discipline by developing disclosure requirements which allow market participants to assess specified information on the scope of application of Basel III, capital, particular risk exposures and risk assessment processes, and hence the capital adequacy of the Group. Disclosures consist of both qualitative and quantitative information and are provided at the consolidated level.

The CBUAE issued Basel III capital regulations, which came into effect from 1 February 2017 introducing minimum capital requirements at three levels, namely Common Equity Tier 1 (CET1), Additional Tier 1 (AT1) and Total Capital. Additional capital buffers (Capital Conservation Buffer and Countercyclical Capital Buffer maximum up to 2.5% for each buffer) introduced are over and above the minimum CET1 requirement of 7%.

In November 2020, CBUAE issued revised standards and guidelines for Capital Adequacy in UAE. The new version to the Standards also includes additional Guidance on the topics of Credit Risk Market Risk, and Operational Risk. In December 2022 CBUAE published revised capital guidelines mainly focused on updates on Pillar 2.

Following are the changes in the revised standards which have been adopted either prior to or during 2022:

- · The Tier Capital Supply Standard
- · Tier Capital Instruments Standard
- Pillar 2 Standard: Internal Capital Adequacy Assessment Process (ICAAP)
- Credit Risk, Market Risk and Operational Risk
- Equity Investment in Funds, Securitisation, Standardised approach for Counterparty Credit Risk, Leverage Ratio
- Credit Value Adjustment (CVA).

CBUAE requires the Pillar 2 - Supervisory Review Process to focus on each bank's Internal Capital Adequacy Assessment Process (ICAAP) in addition to Pillar 1 Capital calculations. The ICAAP should include a risk based forward looking view of, but not limited to, Credit, Market and Operational Risk Capital.

The revised Pillar 3 disclosures, based on a common framework, are an effective means of informing the market about the risks faced by the Group, and provide a consistent and understandable disclosure framework that enhances transparency and improves comparability and consistency.

In compliance with the CBUAE Basel III standards and guidelines, these disclosures include qualitative and quantitative information on the Group's risk management objectives and policies, risk assessment processes, capital management and capital adequacy. The Group's Pillar 3 disclosures are in line with the key elements governed by the disclosure policy framework consistent with CBUAE Basel III standards which is approved by the Group Board Audit Committee.

INTRODUCTION (continued)

Verification

The Pillar 3 Disclosures for the year 2022 have been reviewed by the Group's internal and statutory auditors.

Implementation of Basel III standards and guidelines

The Group is compliant with Standardised Approach for Credit, Market and Operational Risk (Pillar 1) as applicable in 2022.

The Group also assigns capital on other than Pillar 1 risk categories which are part of the Pillar 2 framework.

Group Structure

The Bank was incorporated in the United Arab Emirates on 16 July 2007 consequent to the merger between Emirates Bank International PJSC (EBI) and National Bank of Dubai PJSC (NBD), under the Commercial Companies Law (Federal Law Number 8 of 1984 as amended) as a Public Joint Stock Company (PJSC).

The Bank is listed on the Dubai Financial Market (TICKER: "EMIRATESNBD"). The Group's principal business activities are corporate and institutional banking, retail banking, treasury and Islamic banking. The Bank's website is www.emiratesnbd.com.

The direct subsidiaries of the Group are as follows:

19	Total required stable funding	406,372,194	393,909,338	387,224,893	388,411,483	381,872,177
20	NSFR ratio (%)	121.43%	122.08%	121.71%	121.04%	121.28%

¹"Fully Loaded" means Group's regulatory capital compared with a situation where the transitional arrangement had not been applied. CBUAE introduced transitional arrangements as per circular no. 04/2020 "Regulation Regarding Accounting Provisions and Capital Requirements - Transitional Arrangements".

Key metrics for the Group (KM1) (Continued)

Pursuant to the above regulation, CBUAE issued a regulation for a 'Prudential Filter' that permits Banks to add back increase in IFRS 9 provisions (stage 1 and stage 2) to the regulatory capital over a transition period of 5 years, on a proportionate basis. The increase in IFRS 9 provision requirements is determined by calculating the difference between the IFRS 9 provision as of 31 December 2019 and the IFRS 9 provision as at the respective reporting date. The proportion of the increase in IFRS 9 provisions that is permitted to be added-back to regulatory capital from 1 January 2020 onwards will be phased out over a 5-year transition period (100%, 100%, 75%, 50%, 25% for the years 2020 to 2024 respectively).

² Impacts of implementing IAS 29 - Hyperinflation accounting in Financial Statements are excluded from regulatory ratios calculations.

Quarter on Quarter CET1 capital increased by AED 0.5 billion. Pre-hyperinflation profit for the quarter of AED 4.5 billion was offset by proposed Dividend of AED 3.8 billion and other regulatory deductions of AED 0.2 billion.

Year on year CET1 capital increased by AED 9.0 billion. Mainly pre-hyperinflation profit for the year of AED 16.1 billion was offset by proposed Dividend of AED 3.8 billion and adverse movement of currency translation reserve of AED 3.0 billion.

Refer overview (OV1) disclosure for further details on Risk Weighted Assets (RWAs).

Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories (LI1)

Below table splits the financial balance sheet into each regulatory risk category risk category drives the approach applied in the calculation of regulatory exposures and RWA.

The amounts shown in the column 'Carrying values under scope of regulatory consolidation' do not equal the sum of the amounts shown in the remaining columns of this table for line items 'Derivatives', and Investment Securities' as the assets in this column are subject to regulatory capital charges for credit risk, counterparty credit risk and market risk. Variances between the financial and regulatory consolidated balance sheets in L11 arise primarily from differences in the basis of consolidation. Nonfinancial subsidiaries are not consolidated for regulatory purposes. Impact from IAS 29 - Hyperinflation is not considered in scope of regulatory consolidation.

Main sources of differences between regulatory exposure amounts and carrying values in financial statements (LI2)

Impact of IAS 29 – Hyperinflation accounting is not considered in scope of regulatory consolidation.

Main sources of differences between regulatory exposure amounts and carrying values in financial statements (L12) (Continued)

		ര	q	ပ	ъ	Ð
				Items subject to:	ject to:	
	31 December 2021 AED 000	i	Credit risk	Securitisation	Counterparty credit risk	Market risk
		Total	framework	framework	framework	framework
\vdash	Asset carrying value amount under scope of regulatory consolidation (as per template L11)	681,677,752	671,018,827	,	10,658,925	12,625,378
7	Liabilities carrying value amount under regulatory scope of consolidation (as per template L11)	9,186,321	ı	1	9,186,321	7,966,273
က	Total net amount under regulatory scope of consolidation	672,491,431	671,018,827	'	1,472,604	4,659,105
4	Off-balance sheet amounts excluding derivatives	56,513,466	56,513,466	1	•	•
9	Differences due to different netting rules, other than those already included in row 2	•	ı	•	ı	1
7	Differences due to consideration of provisions and interest in suspense	48,179,883	48,179,883	1		1
œ	Differences due to prudential filters	•	1	•	ı	•
6	Derivatives	16,988,053	•	•	16,988,053	•
10	Exposure amounts considered for regulatory purposes	794,172,833	775,712,176	•	18,460,657	4,695,105

Major differences between carrying values and amounts considered for regulatory purposes are:

- · Off-balance sheet amounts subject to credit risk including undrawn portions of committed facilities, trade finance commitments and guarantees post credit conversion factor (CCF). Further potential future exposures (PFE) are added for counterparty credit risk on derivative exposures.
 - Credit risk adjustments, including Expected Credit Losses (ECL) and interest in suspense (IIS) which are grossed up for regulatory exposures.

Capital Management

The Group's approach to capital management is driven by strategic and organisational requirements, taking into account the regulatory, economic and commercial environment. The Group aims to maintain a strong capital base to support the risks inherent in the business and invest in accordance with strategy, meeting both consolidated and local regulatory capital requirements consistently.

Additional capital buffers (Capital Conservation Buffer (CCB) and Countercyclical Capital Buffer (CCyB) - maximum up to 2.5% for each buffer) introduced over and above the minimum CET1 requirement of 7%.

Over and above additional capital buffers, the Group as a Domestic Systemically Important Bank (D-SIB) is required to keep an additional D-SIB buffer of 1.5% of the capital base.

Regulatory Capital

The Group's capital base is divided into three main categories, namely CET1, AT1 and Tier 2, depending on their characteristics.

- CET1 capital is the highest quality form of capital, comprising share capital, share premium, legal, statutory and other reserves, fair value reserve, retained earnings, non-controlling interest after deductions for goodwill and intangibles and other regulatory adjustments relating to items that are included in equity but are treated differently for capital adequacy purposes under CBUAE guidelines.
- AT1 capital comprises eligible non-common equity capital instruments.
- Tier 2 capital comprises qualifying subordinated debt, and undisclosed reserve.

Details of the Group's qualifying Equity and AT1 instruments are set out in Appendix A.

Composition of regulatory capital (CC1)

This provides a breakup of the elements constituting the Group's capital.

		31 December 2022	31 December 2021	2007
	Common Equity Tier 1 capital: instruments and reserves	AED 000	AED 000	CC2 Reference
1	Directly issued qualifying common share (and equivalent for non-joint stock companies) capital plus related stock surplus	24,270,762	24,270,762	b
2	Retained earnings	64,680,367	52,399,381	f
3	Accumulated other comprehensive income (and other reserves)	(6,452,360)	(2,921,388)

Accumulated other comprehensive income has moved adversely due to Turkish Lira and Egyptian Pound depreciation year on year. Increase in pre-hyperinflation profit of AED 16.1 billion for the year was offset by proposed dividend of AED 3.8 billion.

Reconciliation of regulatory capital to balance sheet (CC2)

The following table enables users to identify the differences between the scope of accounting consolidation and the scope of regulatory consolidation, and to show the link between the bank's balance sheet in its published financial statements and the numbers that are used in the composition of capital disclosure template set out in Template CC1. Variances between the financial and regulatory consolidated balance sheets are consistent with LI1 disclosure.

Total Capital	93,304,149	91,180,293	

Variances between financial and regulatory consolidated balance sheets arise primarily from difference in basis of consolidation. Non-financial subsidiaries are not consolidated for regulatory purposes. Also impacts of implementing IAS 29 - Hyperinflation accounting are excluded from regulatory calculations as of 31 December 2022.

Leverage Ratio

Summary comparison of accounting assets versus leverage ratio exposure (LR1)

The following table reconciles the total assets in the published financial statements to the leverage ratio exposure measure.

		31 December 2022 AED 000	30 September 2022 AED 000	31 December 2021 AED 000
1	Total consolidated assets as per published financial statements	741,961,553	720,523,057	687,436,618
2	Adjustments for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	1,677,354	542,403	(543,515)
3	Adjustment for securitised exposures that meet the operational requirements for the recognition of risk transference	-	-	-
4	Adjustments for temporary exemption of central bank reserves (if applicable)	-	-	-
5	Adjustment for fiduciary assets recognised on the balance sheet pursuant to the operative accounting framework but excluded from the leverage ratio exposure measure	-	-	-
6	Adjustments for regular-way purchases and sales of financial assets subject to trade date accounting	-	-	-
7	Adjustments for eligible cash pooling transactions	-	-	-
8	Adjustments for derivative financial instruments	(3,864,246)	(3,441,975)	7,801,732
9	Adjustment for securities financing transactions (i.e. repos and similar secured lending)	-	-	-
10	Adjustments for off-balance sheet items (i.e., conversion to credit equivalent amounts of off-balance sheet exposures)	76,469,848	69,276,594	74,281,499
11	Adjustments for prudent valuation adjustments and specific and general provisions which have reduced Tier 1 capital	-	-	-
12	Other adjustments ¹	(17,095,140)	(16,431,967)	(22,144,023)
13	Leverage ratio exposure measure	799,149,369	770,468,112	746,832,311

¹This includes Assets deducted from CET1 capital, customer acceptances (considered as off-balance sheet) and Impact of IAS 29 Hyperinflation accounting excluded.

²Total of private sector credit exposures and related RWA across all jurisdictions.

Leverage Ratio (Continued)

Leverage ratio common disclosure template (LR2)

The table below provides a breakdown of the components of the leverage ratio denominator, as well as information on the actual leverage ratio, minimum requirements and buffers as of period end.

	On-balance sheet exposures	31 December 2022 AED 000	30 September 2022 AED 000	31 December 2021 AED 000
1	On-balance sheet exposures (excluding derivatives and securities	704,641,589	683,220,087	660,265,702
_	financing transactions (SFTs), but including collateral)	,,	,	,,
2	Gross-up for derivatives collateral provided where deducted from balance sheet assets pursuant to the operative accounting framework	-	-	-
3	Deductions of receivable assets for cash variation margin provided in derivatives transactions	-	-	-
4	Adjustment for securities received under securities financing transactions that are recognised as an asset		-	-
5	Specific and general provisions associated with on-balance sheet exposures that are deducted from Tier 1 capital	-	-	-
6	Asset amounts deducted in determining Tier 1 capital	(6,654,765)	(6,039,162)	(6,175,547)
7	Total on-balance sheet exposures (excluding derivatives and SFTs) (sum of rows 1 to 6)	697,986,824	677,180,925	654,090,155
	Derivative exposures			
8	Replacement cost associated with all derivatives transactions (where applicable net of eligible cash variation margin and/or with bilateral netting)	4,152,404	5,465,627	4,183,473
9	Add-on amounts for PFE associated with all derivatives transactions	5,377,285	5,745,824	9,002,711
10	Exempted CCP leg of client-cleared trade exposures	-	-	-
11	Adjusted effective notional amount of written credit derivatives	-	-	-
12	Adjusted effective notional offsets and add-on deductions for written credit derivatives	-	-	-
13	Total derivative exposures (Calculated as rows 8 to 12)*1.4	13,341,565	15,696,031	18,460,657
	Securities financing transactions			
14	Gross SFT assets (with no recognition of netting), after adjusting for sale accounting transactions	11,351,132	8,314,562	4,624,954
15	Netted amounts of cash payables and cash receivables of gross SFT assets	-	-	(4,624,954)
16	CCR exposure for SFT assets	-	-	-
17	Agent transaction exposures	-	- 244 542	
18	Total securities financing transaction exposures (sum of rows 14 to 17) Other off-balance sheet exposures	11,351,132	8,314,562	-

OVERVIEW OF RISK MANAGEMENT AND RISK WEIGHTED ASSETS (RWA)

Risk management approach

Please refer Note 46 of the Group's annual financial statements for the risk management framework including: risk governance structure, risk profile and risk measurement systems of the Group, risk reporting to the board and senior management and risk mitigation.

The Group operates a wide-ranging stress testing programme that support risk management and capital planning. It includes execution of stress tests mandated by regulators. The Group's stress testing is supported by dedicated teams and infrastructure. The testing programme assesses capital strength and enhances resilience to external shocks, thereby helping to understand and mitigate risks and informed decision making on capital levels.

Overview of Risk Weighted Assets (RWAs) (OV1)

The following table provides an overview of total RWAs forming the denominator of the risk-based capital requirements. Further breakdowns of RWA are presented in subsequent parts.

					Minimum capital requirements
		31 December 2022	30 September 2022	31 December 2021	31 December 2022
		AED 000	AED 000	AED 000	AED 000
1	Credit risk (excluding counterparty credit risk)	419,870,117	414,596,526	380,513,816	60,881,167
2	Of which: standardised approach (SA)	419,870,117	414,596,526	380,513,816	60,881,167
3	Counterparty credit risk (CCR)	8,669,836	10,125,464	11,335,237	1,257,126
4	Of which: standardised approach for counterparty credit risk	8,669,836	10,125,464	11,335,237	1,257,126
5	Credit valuation adjustment (CVA)	8,010,170	9,151,719	-	1,161,475
6	Equity investments in funds - look- through approach	-	-	-	-
7	Equity investments in funds - mandate- based approach	-	-	-	-
8	Equity investments in funds - fall-back approach	1,026,015	1,030,643	1,095,047	148,772
9	Settlement risk	-	-	-	-
10	Securitisation exposures in the banking book	-	-	-	-
11	Of which: securitisation external ratings-based approach (SEC-ERBA)	-	-	-	-
12	Of which: securitisation standardised approach (SEC-SA)	-	-	-	-
13	Market risk	12,970,243	12,455,710	10,945,304	1,880,685
14	Of which: standardised approach (SA)	12,970,243	12,455,710	10,945,304	1,880,685
15	Operational risk	48,323,649	42,492,456	42,492,456	7,006,929
16	Total (1+3+5+8+13+15)	498,870,030	489,852,518	446,381,860	72,336,154

The regulatory minimum capital requirement is calculated at 14.5% of the RWA including CBUAE assigned capital buffers.

Credit risk weighted assets (excluding CCR) increased by AED 5.3 billion quarter on quarter due to increase in foreign sovereign exposures, growth in retail lending, interbank placements and other off-balance sheet commitments.

Reduction in CCR & CVA during the quarter is driven by reduced notionals.

Operational risk increased due to increase in average operating income.

Credit Risk

Please refer Note no. 46D in the annual financial statements for criteria, approach, structure, and organization of credit risk management and reporting of risk exposures, risk mitigation and stress testing related to credit risk. For definition of default please refer Note 5(i) of annual financial statements.

Credit quality of assets – (CR1)

The table provides a comprehensive picture of the credit quality of the Group's (on- and off-balance sheet) assets.

Additional Disclosure Related to The Credit Quality of Assets (CRB)

Definition of Default

Please refer Note 7 in the annual financial statements for scope and definitions of 'past due' and 'impaired' exposures.

Past due exposures not impaired

As at 31 December 2022 nil (2021: nil) past due exposures were not impaired.

The methods used for determining accounting provisions for credit losses and adopting an ECL accounting model for categorisation of ECL accounting provisions in general and specific categories for standardised approach exposures has been detailed in the annual financial statements Note 7(j).

Restructured Financial Assets

Please refer Note 7(j) of the annual financial statements for the year ended 31 December 2022 for policy on restructured financial assets details.

As at 31 December 2022, impaired restructured loans constituted AED 16.5 billion (2021: AED 15.5 billion).

Gross Credit Exposure - Currency Classifications

The Group's gross credit exposure by foreign and local currency, both funded and non-funded is detailed below:

Qualitative Disclosure Requirements Related to Credit Risk Mitigation Techniques – (CRC)

Please refer Note 46 in the annual financial statements for criteria, approach, structure and organization of credit risk management and reporting of risk exposures, risk mitigation and stress testing related to credit risk. The Group has adopted comprehensive approach for collateral valuation assessment. Categories of collaterals include cash/fixed deposits, shares, guarantees (corporate and bank guarantees) and gold. As at 31 December 2022, total eligible collaterals held by the Group amounted to AED 38.7 billion (2021: AED 29.7 billion). CR3 table below discloses collaterals securing loans and debt securities only. Out of these, AED 16.08 billion (2021: AED 14.7 billion) were held as cash collaterals.

Credit risk mitigation techniques – overview (CR3)

The following table discloses the extent of use of credit risk mitigation techniques.

Qualitative Disclosures on Banks' Use Of External Credit Ratings Under The Standardised Approach For Credit Risk (CRD)

Recognition of External Credit Assessment Institutions (ECAI)

The standardised approach requires banks to use risk assessments prepared by ECAIs to determine the risk weightings applied to rated counterparties. As advised by CBUAE; Moody's Investor Service (Moody's), Standard and Poor's rating agency (S&P) and Fitch Ratings (Fitch) have been used for ratings purpose.

The Group in line with CBUAE guidelines follows below rating matrix in determining the risk weights.

Long term rating correspondence

S & P	Fitch	Moody's
AAA to AA-	AAA to AA-	Aaa to Aa3
A+ to A-	A+ to A-	A1 to A3
BBB+ to BBB-	BBB+ to BBB-	Baa1 to Baa3
BB+ to BB-	BB+ to BB-	Ba1 to Ba3
B+ to B-	B+ to B-	B1 to B3
Below B-	Below B-	Below B-
Unrated	Unrated	Unrated

If there is only one rating, that rating is used to determine the risk weight of the exposure. If there are two ratings that map to different risk weights, the higher risk weight is applied.

If there are three ratings with different risk weights, the ratings corresponding to the two lowest risk weights is referred to. If these give rise to the same risk weight, that risk weight is applied. If different, the higher risk weight is applied.

ECAIs risk assessments are used within the Group as part of the determination of risk weightings for the following classes of exposure:

SovereignsPublic Sector EnterprisesBanksCorporates

All other exposure classes are assigned risk weightings as prescribed in the CBUAE standards.

Credit risk exposure and Credit Risk Mitigation (CRM) effects (CR4)

The following table illustrates the effect of CRM on capital calculations and RWA density, providing a synthetic metric on riskiness of each portfolio.

Risk weight composition on banks has improved due to higher quality exposures during the year, coupled with overall increase in exposures across all asset classes.

Counterparty Credit Risk - (CCR)

Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before the final settlement. The value of derivative transactions will change with fluctuations in factors such as interest rates, foreign exchange rates, equities or commodities. The Group is exposed to CCR from its sales, trading and balance sheet management activities. CCR is managed through the Counterparty Credit Risk Policy and methodology framework.

Counterparty Credit Risk Oversight and Management

The Board Credit and Investment Committee (BCIC) is the board level committee with an oversight on counterparty credit risk. The Group Risk Committee (GRC) and Management Credit Committee (MCC) are the management level committees responsible for the same and have an oversight on policy, methodology and limit framework.

Group Market & Treasury Credit Risk (MTCR) is a group function which is independent from the first line client relationship and product risk taking units. MTCR reports directly to the Group Chief Risk Officer (CRO), has second line responsibility for measuring, monitoring and assisting with managing counterparty credit risk in the Group.

Identification

Existing credit underwriting process, New Products and Process Approvals (NPPA) and ongoing discussions with business units and obligors are the methods adopted by the Group in its CCR management process.

Measurement

Mark-to-Market, Potential Future Exposure, Issuer (Risk) Exposure, Repo Exposure and Settlement (Risk) Exposure are calculated and reported on a daily basis. Approved risk measurement methodology is used to model statistical CCR measures such as the Potential Future Exposure (PFE). For derivative contracts, the total credit exposure of a contract is computed as peak exposure at a specified confidence interval over the remaining term of the contract.

Monitoring, Control and Reporting

Only authorised sales and trading activities for approved products and risk types are used by the Global Markets & Treasury business. Limits are approved to reflect credit exposure amount and tenor appetite. CCR positions are monitored daily against approved and allocated CCR limits. Exceptions, including any temporary breaches, are reported and escalated to senior management. CCR Limits are reviewed annually in accordance with applicable credit policies, processes and approval delegation. Interim reviews are undertaken where necessitated by change in counterparty credit worthiness and/or business plans. Appropriate counterparty credit limits are established for each counterparty based on the Group's assessment of the counterparty's creditworthiness. CCR limits are subject to regular review and are approved within the overarching framework of credit risk management. Counterparties are actively monitored and reviewed. Collateral may be taken to partially or fully cover mark-to-market exposures on outstanding positions. The collateral agreement typically includes a minimum threshold amount where additional collateral is to be posted by either party if the mark-to-market exposures exceed the agreed threshold. Master agreements, such as those from the International Swaps and Derivatives Agreement (ISDA) also allow for closeout netting if either counterparty defaults. The group also uses Central Clearing Counterparty (CCP) through clearing banks to reduce counterparty risk for Over the Counter (OTC) derivatives.

Counterparty Credit Risk Limits

The Group's credit policy focuses on the core credit principles, lending guidelines and parameters, control, monitoring and IFRS 9 reporting requirements, problem loan identification, management of high-risk borrowers and provisioning. Standard procedures specific to businesses are in place to manage various types of risks across different business segments, products and portfolios.

Counterparty Credit Risk Capital Calculation

For regulatory capital charge purposes of Over the Counter (OTC) derivatives, the Group calculates pre-settlement capital adequacy requirement using following counterparty credit risk measures:

Counterparty Credit Risk - (CCR) (Continued)

- Standardised Approach to Counterparty Credit Risk Capital Calculation (SA-CCR) Transition from current exposure method from December 2021
- Standardised Credit Valuation Adjustment Capital Charge (S-CVA) from 30 June 2022

Risk Category	Approach	Application
Derivatives	Standardised Approach for Counterparty Credit Risk (SA-CCR)	SA-CCR calculates the exposure at default of derivatives and "long-settlement transactions" exposed to counterparty credit risk. It builds EAD as (i) a "Replacement Cost", were the counterparty to default today; combined with (ii) an "Add On" with its appropriate multiplier, essentially potential future exposure. The SA-CCR EAD is an input to the bank's regulatory capital calculation where it is combined with the counterparty's external ratings to derive risk weights.
	Standardised Credit Valuation Adjustment (S-CVA)	Group also provides capital requirement to cover the risk of mark-to-market losses on the expected counterparty risk (such losses being known as CVA) to OTC derivatives.

Wrong Way Risk (WWR)

WWR arises when there is adverse (positive) correlation between a client's credit worthiness (probability of default) and the Group's credit exposure to that client. Wrong Way Risk is broadly categorised as either general or specific.

General Wrong Way Risk (GWWR) – GWWR arises where there is adverse (positive) correlation between the client's credit worthiness (PD) and the Group's exposure to the client owing to a co-dependency on non-client specific, market driven risk factors such as market levels for Forex, Interest Rates or Commodities. GWWR transactions are strongly discouraged and require pre-approval.

Specific Wrong Way Risk (SWWR) - SWWR arises when there is adverse (positive) correlation between the client's credit worthiness (PD) and the Group's exposure to the client owing to the respective counterparty-group specific reasons. These would include trades with direct or indirect reference (including underlying collateral) to the counterparty or related entity's (parent, holding company, subsidiary, group entity) equity price or credit spread. These also include direct or indirect reference to the Group's security issuances. SWWR transactions are not permitted unless pre-approved.

Policy guidelines related to WWR are integrated in the Group's Counterparty Credit Risk Policy Framework. The goal of these guidelines is to provide best practices and guidelines for the identification, approval, reporting and mitigation of specific and general WWR.

Derivative Master Netting Agreements and Margin Agreements

Credit risk from derivatives is mitigated where possible through netting agreements whereby derivative assets and liabilities with the same counterparty can be offset. The Group policy requires all netting arrangements to be legally documented. ISDA (International Swaps and Derivatives Association) master agreements are the Group's preferred manner for documenting OTC derivatives.

The agreements provide the contractual framework within which dealing activities across a full range of OTC products are conducted and contractually bind both parties to apply close-out netting across all outstanding transactions covered by an agreement if either party defaults or other predetermined events occur.

Counterparty Credit Risk - (CCR) (Continued)

The Group considers the level of legal certainty regarding enforceability of its offsetting rights under master netting agreements and credit support annexes to be an important factor in its risk management process.

In-house legal counsel independently review relevant jurisdictions, counterparties and respective master agreements and advise business and risk units on close-out netting and collateral enforceability.

The SA-CCR and S-CVA capital charge accordingly incorporates the margining impact due to these enforceable netting and margining agreements.

Impact of the Group's Rating downgrade on Collateral

The liquidity impact of a downgrade on collateral management from the Group's perspective is not material as the collateral agreements are generally not linked to Group's rating.

Analysis of counterparty credit risk (CCR) exposure (CCR1)

The following table provides details of counterparty credit risk regulatory requirements and the main parameters. CBUAE requires banks to calculate CCR using standardised approach

Market Risk

Market Risk is the risk that the value of financial instruments in the Group's books – with the inclusion of some other financial assets and liabilities could produce a loss because of changes in future market conditions.

The Group takes on market risks in the pursuit of its strategic and business objectives.

The Group predominantly pursues opportunities in the market that exposes itself to the following categories of market risk - which are actively managed and monitored:

- Interest Rate Risk: losses in value due to changes in the level, slope and curvature of yield curves, the volatility of interest rates and changes in credit spreads.
- FX Risk: losses in value due to exposures to changes in spot prices, forward prices and volatilities of currency rates.
- Credit Spread Risk: Losses in the value due to change in credit spreads driven by associated credit risk of the security issuer/underlying.
- Commodity Price Risk: losses in value due to exposures to changes in spot prices, forward prices and volatilities of commodities such as precious metals.

Respective desk head/managers are accountable for managing market risk within the approved limits. These managers have extensive knowledge of markets and products, their risk exposures and of the financial instruments available to hedge their exposures.

The Group's risk exposures to market risk are segregated into Trading and Banking Books. The Trading Book include those financial instruments held with trading intent arising from market-making, position-taking and other so designated financial instruments accounted for at fair value daily. The Banking Book include financial instruments not held with trading intent that arise from the management of Interest Rate risk and FX risk from the Group's retail and corporate and institutional banking assets and liabilities, and other financial investments designated as either Fair value through other comprehensive income (FVOCI) or Amortised Cost.

Market risk oversight and management process

As part of the Group's enterprise-wide risk management framework, an extensive governance process is applied to the market risk taking activities. This governance framework includes, inter alia:

- Approval by the Board Risk Committee and Group Asset-Liability Committee of a set of risk limits with appropriate monitoring, reporting and limits excesses' escalation procedures;
- Independent valuation of financial instruments in the Trading Book and measurement of market risk;
- A comprehensive set of policies, procedures and limits; and
- Monitoring a wide range of risk metrics appropriate for the respective trading activities such as risk sensitivities, Gross and Net open positions, Value-at-Risk (VaR) and stop-loss limits.

The Group uses appropriate and independently validated market standard models for the revaluation and risk measurement of its trading book financial products and receives regular market information from independent market data providers in order to measure and monitor market risk.

Trading book oversight by Group Market & Treasury Credit Risk (MTCR)

MTCR is a group risk function which is independent from the first line market risk taking units. MTCR reports directly to the Group CRO, has second line responsibility for measuring, monitoring, and managing market risk in the Group, in co-operation with other independent and support functions across the Group's global businesses.

MTCR monitors the limits' utilisation in the Trading Book of the Group on a daily basis through a multi-layered Limit Monitoring System which uses independently sourced data and reports from the Global Markets & Treasury IT systems.

Market Risk (Continued)

Depending on the trading exposure and as appropriate, MTCR uses appropriate metrics including:

- Non statistical metrics: Interest rate sensitivity, (DV01/PV01), FX sensitivity (FX01), Net open/Net Gross outstanding positions, Maximum notional and tenor measures, Derivatives' Greek sensitivities (Delta, Gamma, Vega), and Stop-Loss limits;
- Statistical metrics: Value-at-Risk (VaR), by Desk as well as total for the whole Trading Book.

At a minimum, Trading Book limits are reviewed and approved by the Board Risk Committee and Group Asset-Liability Committee on an annual basis. Portfolio updates are presented to Group Asset-Liability Committee on a monthly basis as well as to Board Risk Committee on a quarterly basis.

Market Risk Capital

The Group calculates market risk capital requirements using Basel III Standardised Approach. The following risk types are covered by Basel III Standardised Approach:

Risk arising from fluctuations in the level of interest rates in the market Interest rate risk:

environment and impacts prices of interest rate sensitivities financial

instruments.

Equity risk: Risk arising from fluctuations in equity prices, volatilities and dividend yields.

Risk arising from fluctuations in foreign exchange rates and impacts transactions Foreign exchange risk:

denominated in a currency other than the domestic currency of the Group.

Commodity risk: Risk arising from fluctuations in the prices of commodities.

Risk arising from fluctuations in the volatilities and prices/rates impacts financial Options Risk:

instruments with optionality.

55

Market risk under the Standardised approach – (MR1)

The following table provides the components of capital requirement under the Standardised Approach for market risk:

		31 December 2022 RWA AED 000	31 December 2021 RWA AED 000

Operational Risk - (ORA)

For details of Group's Operational Risk Management, kindly refer Note 46L in the Financial Statements.

Basel III framework outlines three methods for calculating the risk charge for operational risk: Basic Indicator, Standardised Approach and Advanced Measurement Approach. The Group presently follows the Standardised Approach.

The total capital requirement for Operational Risk as at 31 December 2022 is AED 7.0 billion (2021: AED 6.2 billion). This charge is computed by categorising the Group's activities into 8 business lines (as defined by CBUAE guidelines) and multiplying the line's three-year average gross income by a pre-defined beta factor.

Interest Rate Risk in The Banking Book (IRRBB)

IRRBB Risk Management Objectives and Policies – (IRRBBA)

Overview

Interest Rate Risk in the Banking Book (IRRBB) is defined as potential loss of future earnings or economic value due to adverse movement in interest rates, which arises from a mismatch in the repricing profile of assets, liabilities and off-balance sheet items in the banking book.

Management

In order to manage this risk optimally, IRRBB in non-trading portfolios is transferred to Group Treasury under the supervision of the Group ALCO, through Funds Transfer Pricing (FTP) framework. Interest rate risk is managed by Treasury under oversight of Group ALCO and within the Risk Appetite approved by the Board. The interest rate risk management process also involves utilisation of off-balance sheet hedging strategies. The accounting treatment of hedges is described in the Note no.7 of the Financial Statement. The Finance and Risk functions are responsible for measurement, monitoring, formulation of policy framework and provide periodic updates to the Group ALCO and the BRC. The Internal Audit provides an independent opinion to the Board Audit Committee(BAC) on the adequacy and effectiveness of risk governance and internal controls. The Group ALCO regularly monitors the interest rate risk positions and if required directs suitable remediation to ensure this remains within Risk Appetite.

Measurement

The Group uses two key metrics for measuring IRRBB: Net Interest Income (NII) sensitivity, an income measure which quantifies the potential change in projected net interest income over a one-year horizon for defined movements in interest rates and Economic Value of Equity (EVE), a value measure which estimates the potential change in present value of the Group's Assets and Liabilities for defined movements in interest rates. These metrics are measured and monitored on periodic basis.

The NII sensitivity disclosed below is calculated based on a stressed assumption of parallel shifts to the yield curve as recommended by Basel and assessing the corresponding impact on NII over a one-year horizon. The EVE sensitivity disclosed below is calculated based on a stressed assumption of parallel and non-parallel shifts to the yield curve as recommended by Basel. Further, the EVE computations are based on a gap analysis with a repricing schedule that distributes the principal cash flows into granular time buckets and discounted with the equivalent risk-free rate. For December 2021, the sensitivity analysis performed for down rate shocks includes a floor to the market rates at zero, unless the market rates are already negative. The average repricing maturity of retail, wholesale non-maturity deposits are determined based on historical analysis conducted normally over a period of 5 years. Considering the nature, size, and duration of the portfolio, the interest rate risk on account of early settlement would not be significant relative to the portfolio and is excluded from computation assumptions.

Quantitative Disclosure

- Average repricing maturity assigned to NMDs 2.3 years
- Longest repricing maturity assigned to NMDs 5 years

Sensitivity of economic value of equity and NII - IRRBB1

The below table indicates the economic value of equity and net interest income under each of the prescribed interest rate shock scenarios.

Liquidity

Overview and Governance

Liquidity Risk refers to the inability of the Group to fund an increase in assets and meet obligations as they become due (Structural Funding Risk), or the inability to convert assets into cash at reasonable prices (Market Liquidity Risk). The risk arises from mismatches in the amount and timings of cash flows.

The Group's Board of Directors (BOD), through the Board Risk Committee (BRC), sets out the absolute boundaries of the Group's Risk Appetite. The Group Asset Liability Committee (Group ALCO) is the principal senior management committee supporting the BOD to effectively discharge their oversight function on the Group's liquidity risk. Group ALCO is responsible for managing the liquidity risk within the internally approved Risk Appetite. The Group ALCO executes the liquidity risk management strategies through Treasury and Business units. The Finance and Risk functions are responsible for measurement, monitoring, formulation of policy framework and provide periodic updates to the Group ALCO and the BRC. The subsidiaries and international locations manage the liquidity risk profile through the local ALCOs under the guidance of the Group ALCO.

Management

The objective of the Group's liquidity and funding management framework is to ensure that all foreseeable funding commitments, under both normal and stressed conditions can be met when due. To this end, the Group maintains a diversified funding base comprising core retail and corporate customer deposits and institutional balances. The funding profile is further augmented with Term funding from Capital Market and Wholesale funding sources. The Group maintains a portfolio of High Quality, Liquidity Assets across the geographies to enable the Group to respond quickly and smoothly to unforeseen liquidity requirements. The details of liquidity risk maturity analysis are in the Note 46 N & O of the annual financial statements.

Liquidity (continued)

The Group's ALCO through the Funds Transfer Pricing (FTP) framework incorporates the liquidity costs, benefits and risks in the internal pricing of assets and liabilities to the business lines.

The funding liquidity management process includes:

- projecting cash flows under various stress scenarios and considering the level of liquid assets necessary in relation thereto;
- mismatch analysis between assets and liabilities for different periods with a focus on shorter time frames. These gap reports are based on contractual cash flow with overlays of behavioural assumptions for non-maturing assets and liabilities and potential liquidity demand through undrawn commitments;
- monitoring balance sheet liquidity, advances to deposits ratios, long term funding ratios, Liquidity Coverage Ratio (LCR) and Net Stable Funding Ratio (NSFR) against internal and regulatory requirements;
- maintaining a diverse range of funding sources with back-up facilities;
- managing the deposit concentration and profile of debt maturities;
- maintaining debt financing plans;

Stress Testing

Stress Testing is an integral part of the Liquidity Risk Management Framework. The objective of stress testing is to ensure that the Group maintains adequate level of liquidity to be able to withstand a range of severe stress scenario. The Group conducts liquidity stress testing across Systemic, Bank Specific and Combined Scenarios and ensures that the Survival Horizon across these stress scenarios remains within the Board approved appetite. The Stress Tests are conducted on a periodic basis and updated to the Group ALCO and the BRC.

Contingency Funding Plan

The Contingency Funding Plan (CFP) sets out the Group's strategies to respond to a severe disruption of the Group's liquidity or funding position due to internal or external events. The plan designates the CFP Team, which will be activated in the event of a liquidity crisis and establishes allocation of roles within the Team. The CFP includes a set of early warning triggers consisting of internal and external indicators, which are monitored by Group ALCO and updated to the BRC. The plan includes identification, invocation and escalation procedures and details potential actions, available sources of liquidity, mitigations and specifies a communication plan, which could be implemented based on the severity of the liquidity crisis.

Liquidity Coverage Ratio (LCR) (LIQ1)

The Liquidity Coverage Ratio (LCR) is a regulatory ratio introduced as a part of the Basel III reforms with an objective to promote short term resilience of the liquidity risk profile of Banks. The ratio requires the Banks to hold an adequate stock of High Quality Liquid Assets (HQLA) to meet the liquidity needs for a 30-calendar day liquidity stress scenario.

The Group measures and reports its LCR under the Central Bank of UAE liquidity regulations. The Group also meets the local prudential LCR requirements across the international footprint, where applicable. The LCR is calculated as a proportion of the stock of unencumbered HQLA against the Net Cash Outflow over a 30-day period after applying the standardised haircuts.

The HQLA comprises cash or assets that can be converted into cash at little or no loss of value. The HQLA eligible securities fall into three categories viz. level 1, level 2A and level 2B. Level 1 assets are of the highest quality and deemed most liquid e.g., Central Bank reserves. Level 2A and 2B assets are reliable source of liquidity but not to the same extent as level 1 and are capped at a maximum of 40% by the regulations.

The Net Cash Outflow comprise of total expected cash outflow as reduced by total expected cash inflows for the 30-day period. The total expected cashflows are calculated by multiplying the outstanding balances of various categories of liabilities, assets and off-balance sheet commitments by prescribed rate at which they are expected to be run off or drawn down over the 30-day period.

Liquidity (continued)

Liquidity Coverage Ratio (LCR) (LIQ1) (Continued)

The LCR calculated based on CBUAE regulations is included in the following table. The LCR disclosure below is a simple average of the month end Group LCR observations over the last quarter of the year.

	AED 000	December 2022 Total unweighted value (average)	December 2022 Total weighted value (average)	December 2021 Total unweighted value (average)	December 2021 Total weighted value (average)

13	Credit and liquidity facilities	120,041,873	9,363,161	97,921,508	7,348,259
14	Other contractual funding obligations	8,149,694	8,149,694	7,443,595	7,443,595
15	Other contingent funding obligations	74,174,211	9,192,511	77,531,561	9,644,586
16	TOTAL CASH OUTFLOWS		124,654,085		113,025,738
17	Secured lending (e.g., reverse repo)	2,050,564	1,538,095	1,762,516	1,379,927
18	Inflows from fully performing exposures	46,445,951	37,722,169	34,432,713	27,010,206
19	Other cash inflows	472,582	472,582	1,288,370	1,288,370
20	TOTAL CASH INFLOWS	48,969,097	39,732,846	37,483,599	29,678,503
		Total	adjusted value	Total	adjusted value
	Total HQLA		141,550,758		138,634,283
	Total net cash outflows		84,921,239		83,347,234
23	Liquidity coverage ratio (%)		166.68%		166.33%

The Group maintained a LCR of 166.68% on an average during last quarter of the reporting year and 182.34% at the year end, which is in excess of the regulatory minimum of 100%. The LCR is influenced by the amount, profile of the funding base and the deployment of funding into customer lending or HQLA investments. The deployment alternatives are assessed on an ongoing basis and adjusted as per the market opportunities, while maintaining a prudent LCR surplus.

Liquidity (Continued)

Liquidity Coverage Ratio (LCR) (LIQ1) (Continued)

The HQLA over the reporting period was 141.6 billion and 90% of this comprised HQLA Level 1 assets, which represents balances held with Central Bank and other high quality sovereign securities. HQLA Level 2A and 2B assets comprised the remaining 10% of the total HQLA. The HQLA presented excludes excess liquidity held at subsidiaries that is deemed not transferable within the Group.

The retail deposits are prescribed a lower run-off factor and comprise 18% of the total cash outflow, whereas wholesale funding is prescribed a higher run-off and comprise 56% of the total cash outflows.

The Group manages liquidity at currency level and cross currency funding is utilised appropriately to manage the currency gaps. The Group measures LCR for major currencies and meets the local currency LCR as per the applicable local prudential requirements.

Net Stable Funding Ratio (NSFR) (LIQ2)

The Net Stable Funding Ratio (NSFR) is a regulatory ratio introduced as part of Basel III reforms with an objective to promote a sustainable funding structure at the Banks. The ratio requires the Banks to maintain a stable funding profile in relation to the composition of their assets and off-balance sheet activities.

The Group measures and reports its NSFR under the Central Bank of UAE liquidity regulations. The Group also meets the local prudential NSFR requirements across the international footprint, where applicable.

The NSFR is calculated as a proportion of Available Stable Funding (ASF) against the Required Stable Funding (RSF). The ASF is defined as the portion of Capital and Liabilities expected to be stable over the time horizon of one year considered by NSFR. The RSF is measured based on broad characteristic of the liquidity risk profile of the Assets and Off-balance sheet exposures. The regulations prescribe the factor to be applied to the outstanding value of Capital, Liabilities, Assets and Off-balance sheet items for NSFR computation.

The NSFR computed based on Central Bank of UAE regulations is included in the following table. The NSFR disclosure below is a simple average of the month end Group NSFR observations over the last quarter of the year.

33	Total RSF					406,372,192
34	Net Stable Funding Ratio (%)					121.43%

The Group maintained a NSFR of 121.43% on an average during last quarter of the reporting year and 122.77% as at the year ended 31 December 2022, which is in excess of the regulatory minimum of 100%. The Group maintains a diversified funding base comprising core retail and corporate customer deposits, institutional balances and capital market term funding. This is illustrated in the composition of Available Stable Funding (ASF) broadly consisting of Capital (20%), Retail deposits (42%) and Wholesale deposits (38%). The Required Stable Funding (RSF) largely comprised the Loan and Advances (82%) whereas the securities held in HQLA assets are prescribed a lower RSF factor.

The NSFR computed based on Central Bank of UAE regulations is included in the following table. The NSFR disclosure below is a simple average of the month end Group NSFR observations over the last quarter of the year.

*Items to be reported in the "No maturity" time bucket do not have stated maturity. These may include, but are not limited to items such as capital with perpetual maturity, non maturity deposit, short positions, open maturity positions, non HQLA equities and physical traded.

The Group maintained a NSFR of 121.28% as at the year ended 31 December 2021, which is in excess of the regulatory minimum of 100%. The Group maintains a diversified funding base comprising core retail and corporate customer deposits, institutional balances and capital market term funding. This is illustrated in the composition of Available Stable Funding (ASF) broadly consisting of Capital (20%), Retail deposits (40%) and Wholesale deposits (40%). The Required Stable Funding (RSF) largely comprised the Loan and Advances (84%) whereas the securities held in HQLA assets are prescribed a lower RSF factor.

Remuneration Policy

The Group has a Remuneration Policy designed to ensure the implementation of appropriate remuneration policies and practices across the Group, with a focus on promoting sound and effective risk management. The Remuneration Policy incorporates key aspects which include, but are not limited to, the Group's Compensation Philosophy, Remuneration Governance framework and Remuneration Structure. The Policy was updated in June 2022 with respect to:

- The criteria for Material Risk Taker (MRT) identification
- The application of deferred compensation as part of variable remuneration
- Performance adjustment associated with malus and clawback.

The Group Remuneration Policy covers all international entities and branches, in addition to specific Remuneration Policies applicable in India, the United Kingdom and Turkey to set out the respective remuneration principles and practices which comply with local remuneration regulations.

Composition and functions of the Group Board Nomination Remuneration & ESG Committee (BNRESGC)

The Group BNRESGC (formerly the Board Nomination and Remuneration Committee, BN&RC) is the main body that oversees remuneration at the Group, on behalf of the Board of Directors. The BNRESGC has independent oversight and control to review and approve HR policies and strategies endorsed by the Group Executive Committee (ExCo) or the Group Chief Executive Officer (CEO).

The BNRESGC consists of three Directors of the Board and assembles on a quarterly basis. Management attendance comprises the Group CEO, the Group Chief Human Resource Officer (GCHRO) and other members of executive and senior management who may attend by invitation.

The BNRESGC guides Management on strategic Human Resources (HR) decisions and reviews and approves changes to HR policies, related to for example succession planning, nationalisation strategy, reward, workforce planning, ExCo compensation and HR governance. The BNRESGC also focuses on HR strategic issues associated with Reward including bonus planning and variable pay policies, to ensure an appropriate balance between risk and financial results.

In relation to international locations, the Group CEO has delegated authority from BNRESGC to approve changes in HR policies for international branches in line with the Group BNRESGC 's Terms of Reference.

Identification of Senior Managers and Material Risk Takers

From a Group perspective, for 2022 performance year, 16 Senior Managers (including current and former) have been identified as those responsible and accountable to the BOD for the sound and prudent day-to-day management of the Group and as key staff responsible for the oversight of the Group's key business lines. i.e., the Group CEO, the Group ExCo, Group Heads of the Control Functions and Group Head of Legal.

In addition to Senior Managers, the Group have identified 35 Material Risk Takers (MRTs) in ENBD Group based on appropriately set qualitative and quantitative criteria to capture all categories of staff whose professional activities have a material impact on the risk profile of the Group and in line with the CBUAE Corporate Governance Regulations (September 2019) and Corporate Governance Standards (September 2019). The qualitative criteria capture staff:

- Whose duties involve the assumption of risk or the taking on of exposure
- · Who engage in the design, sales and management of either securities or derivative products
- Who are incentivised to meet certain quotas or targets by payment of variable remuneration
- In Control Functions.

Remuneration Policy (continued)

Design and structure of remuneration processes

The Group's general remuneration policies and practices aim to provide a Total Reward offering that recognises and rewards performance aligned to our business strategy, within a sound risk management and governance framework that clearly emphasises 'how' goals are achieved in addition to 'what' is achieved and has the following set objectives:

- Attract, retain and motivate talent through fair and equitable remuneration, with an offering that is clear and easy to understand and appropriately balanced between fixed and variable compensation.
- Foster a pay-for-performance culture, with appropriate differentiation based on performance and contribution aligned to the achievement of business objectives.
- Support a culture that generates sustainable growth and value over the long term to our stakeholders, customers, employees and communities.
- Align, drive and reinforce our culture, values and desired behaviours that are integral to the attainment of individual and team results and the achievement of organisational goals.
- Integrate risk management and compensation, promoting conduct based on prudent decision-making and highest ethical standards and guided by internal controls and regulatory compliance.
- Instil a sense of ownership in our employees by providing them with opportunities to share in the company's success through our competitive total reward offering that is linked to exceptional performance and financial results.

The compensation philosophy is subject to independent oversight and control by the Group BNRESGC.

Specific Remuneration Policies have been formally implemented in India, the UK and Turkey to set out the respective remuneration principles and practices which comply with local remuneration regulations. The policies provide a governance framework to promote sound and effective risk management and create, modify and maintain appropriate compensation programmes and processes with adequate supervision and control.

Remuneration - overview of the key risk and their measurement

The Group has elaborated in its Risk Appetite Statement, its focus on steady/sustainable earnings growth through a good risk-reward balance, appropriate risk management techniques and low cost of funding. In addition, the Group intends to optimise revenue derived from trading activities in order to moderate earnings volatility. In line with this philosophy the organisation by design is geared to:

- Maintain earnings growth with strong Asset Quality through disciplined risk management. This is further emphasised by the independence of the Credit & Market Risk Functions from the Sales/Business/Revenue generation functions.
- Ensure that the appetite for material risks assessed by the Group will be in line with the Group-level appetite for maintaining high credit ratings.

The Enterprise and Regulatory Risk unit provides an overarching view of emerging risks and facilitates coordination between key risk functions, in order to minimise risks and achieve business objectives cohesively and effectively. The Group continues to employ an enterprise-wide approach to risk management.

A key element of our compensation philosophy is the integration of risk management and compensation, promoting conduct based on prudent decision-making and highest ethical standards, guided by internal controls and regulatory compliance. From a governance perspective, the BNRESGC oversees the Group remuneration policies, focusing on ensuring that the policies are consistent with and promote sound and effective risk management and do not encourage excessive risk taking. Compensation is linked to corporate, business and individual performance objectives including performance against metrics set by control functions, including risk.

Any variable remuneration to be awarded, to employees are intended to be subject to Ex-Post Risk Adjustments covered in detail further below.

Remuneration Policy (continued)

Overview of main performance metrics for Group's top-level business lines and individuals

In assessing performance, there is a focus on 'how' goals are achieved in addition to 'what' is achieved and this applies to all levels of the Group, including business units and at the individual levels, with MRTs being held to a higher standard on the 'how'. The assessment of the 'how' is aligned to employee behaviors including but not limited to living the organisational values and demonstration of good conduct or managing conduct risk in line with the Conduct Risk Policy and Framework.

The Group Scorecard and ExCo Scorecards include qualitative and quantitative measures which are set to support the Group's vision to be the most innovative bank for its customers, people and communities.

- The qualitative measures in the Group and ExCo Scorecards are aligned with the Group's vision and set the objectives of the organisation that are cascaded to business units and employees.
- From a quantitative perspective, there are metrics in the Scorecard focused on the following areas: Financials, Customer and Communities, Growth, Transformation and Innovation, and People. There are also benchmark metrics which are focused on promoting the right behaviours associated with the organisation values and separate metrics set by the Control Functions, setting the minimum level of performance relating to governance, controls and risk management across the organisation. Where these metrics have not been met, this has a negative impact on the overall scoring for the ExCo on their Scorecards.

At the employee level, there are roles that may have standard objectives and/or KPIs applied as assessed by the business. Where appropriate, specific customer conduct objectives are included within individual performance objectives.

Individual remuneration linked to Group-wide and individual performance

The Group's compensation approach is a critical tool for the success of its vision and purpose. Group's compensation philosophy aims to provide a Total Reward offering that recognises and rewards performance aligned to our business strategy, within a sound risk management and governance framework that clearly emphasises 'how' goals are achieved in addition to 'what' is achieved.

Fixed remuneration for employees is set to appropriately reflect the level of professional experience, role responsibilities and seniority of the employee.

The BNRESGC approves the bonus pool taking into account financial and non-financial performance of the Group and overall compliance with the risk appetite. The pay-for-performance principle is then applied and bonus pools are allocated based on the performance of business units and employees measured against a range of performance metrics as set out in the relevant Scorecards. The pay for performance principle underpins variable remuneration.

Performance objectives are set by Group, ExCo and employees at the start of the performance year. The attainment of performance metrics is assessed throughout the year, formally at mid-year and year-end.

The bonus pool allocations to the Risk, Audit and Compliance functions are made irrespective of the overall financial performance of the units they support and are based on the function's performance and overall affordability only.

Employee performance is assessed using performance ratings which are designed to support the pay-for-performance principle and enables the organisation to differentiate between varying levels of performance. Individual bonuses are then determined taking into account the bonus pool funding for the relevant business and employee performance rating.

The Group also applies Ex-Post Risk Adjustment in the form of in-year adjustments as part of the year-end remuneration process or via operation of Malus Adjustment and/or Clawback Adjustment on awards made during periods of material restatement or downturn of financial results for the relevant period.

Remuneration Policy (continued)

Variable remuneration

Variable remuneration, by way of the annual discretionary bonus and incentive payments, is awarded in cash which has been aligned to practice in the local market, whilst enabling the Group to reward employees based on Group, business unit and individual performance. In line with UAE regulatory requirements, variable remuneration to be awarded for the 2022 Performance Year (i.e. in Q1 of 2023), to MRTs identified by Group, will include a deferral element in the form of Deferred Cash.

Different forms of variable remuneration and a description of the factors that determine the mix and their relative importance

The Group's bonus scheme applies the pay-for-performance principle and operates on a discretionary basis. Bonus allocations to employees are determined based on the overall risk-adjusted Group performance, business performance and individual performance, the employee's role and responsibilities, and performance assessment based on both financial and non-financial criteria, including conduct and behaviour.

Incentives apply to certain businesses and sales roles (or operations roles which support the sales roles) and/or roles responsible for recoveries against outstanding collections. The incentives also operate on the pay-for-performance principle. Incentives are calculated based on value-add, whether it be associated with the effort made by selling products and growing portfolios or volumes of transactions processed. Quantitative targets are set for specific roles and measurement against the quantitative targets are based on a set formulaic approach. Conduct, quality and risk measures apply to the performance assessment of the employee and impact the overall incentive payout to the employee. Employees who are under an incentive scheme are not also entitled to annual bonuses.

The Group may award a Guaranteed bonus to new hires, for the first year of employment only. The Guaranteed bonus compensates for the loss of an annual bonus award from a prior employer that will be forfeited solely as a result of joining ENBD, in addition to the employee's performance at ENBD for the relevant performance year. In addition to the Guarantee, an employee may also be awarded a discretionary annual bonus subject to their performance at ENBD and in limited cases. Guaranteed bonuses will only be awarded in exceptional circumstances and in line with regulatory requirements. Guarantees will also be subject to deferral where awarded to MRTs.

The Group may grant a Buy-out award to new hires to compensate for the loss of unvested deferred compensation awards from a prior employer that will be forfeited solely as a result of the new hire ceasing employment with their prior employer to join ENBD. The applicable Buy-out would also be taken into account at the time the new hire is selected.

Retention awards are awarded in very limited circumstances. Retention awards are granted to select talent, existing employees based on business requirements with the aim of retaining top talent and/or critical resources to the business and taking into account the scarcity of talent both within the Group and in the marketplace.

Severance payments are considered to be both fixed and variable pay, where fixed payments are contractual such as Gratuity in line with UAE Labour Law, and variable payments are those payments which are discretionary in nature such as Ex-gratia.

Another form of Fixed Remuneration captured is Employer Pension Contributions.

Remuneration related to risk and compliance employees

As Senior Managers of the Group, the variable remuneration of the Head of Risk and Head of Compliance are directly overseen by the BNRESGC.

Remuneration for Risk and Compliance employees is set at a level to attract and retain suitably qualified and experienced employees and is predominantly fixed remuneration (when considering the fixed:variable remuneration ratio). Performance is assessed based on the objectives of their respective functions and not on the performance of the business units that they oversee/support.

The bonus pool allocations to the Risk and Compliance functions are made irrespective of the overall financial performance of the business units they support and are based on the function's performance and overall affordability of the Group. Individual variable remuneration decisions for Control Function employees are determined independently of the business areas that they oversee/support.

Engagement of External professional consultants

External professional consultants are engaged by the Group HR Reward team and local Compliance teams on a regular basis to ensure Group's remuneration policies, practices and processes are in alignment with the market and compliant with regulatory requirements in each relevant jurisdiction.

Remuneration awarded during the financial year (REM1)

The following table includes information on fixed and variable remuneration for the financial year.

		31 December 2022 AED 000	31 December 2022 AED 000
		Senior Management	Other Material Risk takers
	Fixed Remuneration		
1	Number of employees	16	35
2	Total fixed remuneration (7 + 5 + 3)	54,561	51,219
3	Of which: cash-based	54,186	50,137
4	Of which: deferred	-	-
5	Of which: shares or other share-linked instruments	-	-
6	Of which: deferred	-	-
7	Of which: other forms	375	1,082
8	Of which: deferred	-	-
	Variable Remuneration		
9	Number of employees	15	33
10	Total variable remuneration (15 + 13 + 11)	48,173	34,081
11	Of which: cash-based	48,173	34,081
12	Of which: deferred	2,381	1,100
13	Of which: shares or other share-linked instruments	-	-
14	Of which: deferred	-	-
15	Of which: other forms	-	-
16	Of which: deferred	-	-
17	Total Remuneration (2+10)	102,734	85,300

Special Payments (REM2):

The following table includes quantitative information on special payments for the financial year.

31 December 2022

AED 000	Guaranteed	Bonuses	Sign on A	wards	Severance	Payments
Special Payments	Number of employees	Total amount	Number of employees	Total amount	Number of employees	Total amount
Senior Management	-	-	-	-	1	3,404
Other Material Risk-takers	-	-	-	-	-	-

Deferred remuneration (REM3)

During the 2022 performance year, deferrals were only awarded in particular jurisdictions in which the Group have subsidiaries or branches and are subject to local regulatory requirements which require deferrals to be applied to those employees who have a material influence on the risk profile of Group's respective branch or subsidiary. These countries are India and Turkey.

In both of these jurisdictions, deferrals are applied to the regulated population in line with local regulations. The proportion of deferrals is based on a set percentage of bonuses and applied consistently across the said population (subject to de minimis provisions) in the relevant jurisdiction.

In line with UAE regulatory requirements, variable remuneration to be awarded for the 2022 Performance Year (i.e. in Q1 of 2023), to MRTs identified by Group, will include a deferral element in the form of Deferred Cash.

Deferrals were also applied to retention payments awarded during the year with the aim of retaining critical resources to the business.

Policy and criteria for adjusting variable remuneration, including deferrals before vesting and after vesting through clawback arrangements

The specific criteria for Ex-Post Risk Adjustment will be reviewed by the Group BNRESGC annually and applied in each case as determined by the Committee in its sole discretion.

Group will take into account all relevant factors (including, where any of the circumstances described above arise, the proximity of the employee to the failure of risk management in question and the employee's level of responsibility) in deciding whether, and to what extent, it is reasonable to seek recovery of any or all of their variable remuneration.

The Group intends to apply Ex-Post Risk Adjustment in the form of in-year adjustments as part of the year-end remuneration process or via operation of Malus Adjustment and/or Clawback Adjustment on variable awards made.

Deferred remuneration REM3 (Continued)

The following table includes quantitative information on senior management remuneration and MRTs for the financial year.

31 December 2022 AED 000 Deferred and retained remuneration	Total amount of outstanding deferred remuneration	Of which: Total amount of outstanding deferred and retained remuneration exposed to ex post explicit and/ or implicit adjustment	Total amount of amendment during the year due to ex post explicit adjustments	Total amount of amendment during the year due to ex post implicit adjustments	Total amount of deferred remuneration paid out in the financial year

Glossary

Capital conservation buffer

A capital buffer prescribed by BCBS and CBUAE under Basel III and designed to ensure banks build up capital buffers outside periods of stress which can be drawn down as losses are incurred. Should the bank's CET1 capital fall within the capital conservation buffer range, capital distributions will be constrained by the regulators.

Countercyclical capital buffer (CCyB)

The countercyclical capital buffer is part of a set of macroprudential instruments, designed to help counter procyclicality in the financial system. CCyB as defined in the Basel III standard provides for an additional capital requirement of up to 2.5 per cent of risk-weighted assets.

Counterparty credit risk (CCR)

The risk that a counterparty defaults before satisfying its obligations under a derivative, a securities financing transaction (SFT) or a similar contract.

Credit Conversion Factor (CCF)

Factors used to convert off-balance-sheet items into credit exposure equivalents.

Credit risk adjustment (CRA)

This includes impairment allowances or provisions balances, and changes in ECL.

Credit risk mitigation (CRM)

Credit risk mitigation is a process to mitigate potential credit losses from any given account, customer or portfolio by using a range of tools such as collateral, netting agreements, credit insurance, credit derivatives and guarantees.

Domestic systemically important banks (D-SIBs)

Domestic systemically important banks are deemed systemically relevant for the domestic financial system in which they operate. The CBUAE and the BCBS have developed a framework for identifying and dealing with D-SIBs. The Central Bank of the UAE annually assesses national banks at their consolidated group level and foreign banks at their UAE branch level; to designate banks whose failure could escalate to systemic risk for the UAE banking sector and eventually impact the economy.

Internal Capital Adequacy Assessment Process (ICAAP)

A requirement under Pillar 2 of the Basel framework to undertake a comprehensive assessment of their risks and to determine the appropriate amounts of capital to be held against these risks.

Leverage ratio

A ratio introduced under Basel III that compares Tier 1 capital to total exposures, including certain exposures held off-balance sheet as adjusted by stipulated credit conversion factors. Intended to be a simple, non-risk based backstop measure.

Liquidity Coverage Ratio (LCR)

The ratio of the stock of high quality liquid assets to expected net cash outflows over the following 30 days. High quality liquid assets should be unencumbered, liquid in markets during a time of stress and, ideally, be central bank eligible.

Glossary (Continued)

Net stable funding ratio (NSFR)

The ratio of available stable funding to required stable funding over a one-year time horizon, assuming a stressed scenario. It is a longer-term liquidity measure designed to restrain the amount of wholesale borrowing and encourage stable funding over a one-year time horizon.

RWA density

The risk-weighted asset as a percentage of exposure at default (EAD).

Securities Financing Transactions (SFT)

Securities Financing Transactions are secured (i.e. collateralised) transactions that involve the temporary exchange of cash against securities, or securities against other securities, e.g. stock lending or stock borrowing or the lending or borrowing of other financial instruments, a repurchase or reverse repurchase transaction, or a buy-sell back or sell-buy back transaction.

Standardised Approach (SA)

In relation to credit risk, a method for calculating credit risk capital requirements using External Credit Assessment Institutions (ECAI) ratings and supervisory risk-weights. In relation to operational risk, a method of calculating the operational risk capital requirement by the application of a supervisory defined percentage charge to the gross income of eight specified business lines.
